

TURN POINT CAPTAIN'S CHECKLIST

How to set up the turn point letter/symbol

1. Confirm you are at the right location.
2. Using your compass, identify the inbound track of the navigation aircraft.
3. Lay the canvas strips on the ground to the left of the inbound track so that aircraft approaching on the inbound track would view the letter or symbol in its proper orientation in respect to the inbound heading.
4. Anchor the letter/symbol firmly to the ground once the placement and orientation of the letter/symbol is confirmed.
